SUMMARY

DevOps/Cloud Engineer with nearly 3 years of experience building and operating AWS infrastructure and CI/CD pipelines — from large-scale production services at Samsung R&D to greenfield platforms designed end-to-end from client requirements. Skilled in Terraform, Kubernetes (EKS), ECS Fargate, GitOps and observability, with a track record of cutting cloud costs by 20–40%. AWS Certified Solutions Architect – Associate.

WORK EXPERIENCE

Sora Technologies Jul. 2026 – Present

DevOps/Cloud Engineer Hanoi, Vietnam

- Sole DevOps engineer across 3 concurrent product teams; owned a new platform end-to-end from client requirements — greenfield environment bootstrap through first production deployment — and set up the local development stack (Docker Compose with Traefik, PostgreSQL and Floci for credential-free AWS emulation).
- Designed an AWS delivery platform on **ECS Fargate** using a build-once, promote-by-digest model (`crane copy`) — rolling deployments for dev/staging and **blue/green releases via CodeDeploy** in production, eliminating rebuild drift between environments.
- Authored the complete **Terraform** codebase with automated policy and security gates (TFLint, tfsec, Checkov), provisioning RDS PostgreSQL 16, ElastiCache Valkey, SQS/EventBridge with DLQs, SES, CloudFront, WAF, ALB and Route 53.
- Built **GitHub Actions** pipelines for a Node 24 frontend and FastAPI backend (uv, Ruff, mypy, pytest, Alembic migration checks) with Gitleaks and Trivy scanning; established the security and observability baseline — GuardDuty, CloudTrail, AWS Config, KMS, Secrets Manager and **OpenTelemetry (ADOT)** tracing into CloudWatch.

Samsung R&D Center Vietnam Mar. 2024 – Jun. 2026

DevOps/Cloud Engineer Service Operation P.

- Built end-to-end CI/CD pipelines (GitHub Actions, Jenkins, ArgoCD, AWS CodeDeploy) and automated provisioning with Terraform and GitOps, enabling repeatable, version-controlled environments across multiple production services.
- Managed AWS infrastructure for 3 production services — **Samsung Remote Test Lab, Galaxy Gift, and Samsung Messaging Platform** — enforcing security practices aligned with CVE standards and operational quality through structured checklists and compliance reviews.
- Architected and operated cloud-native Kubernetes microservices on **Amazon EKS**; designed the observability stack (Prometheus, Grafana, CloudWatch) and authored runbooks and incident response playbooks that improved detection time and team response consistency.
- Identified and executed cloud cost optimization initiatives — including rightsizing compute resources and architectural redesigns — achieving **20–40% annual cost reduction** across managed AWS environments.

EDUCATION

Hanoi University of Industry Oct. 2020 – Jun. 2024

Bachelor of Computer Science CPA: 3.47

Samsung Talent Program (STP) Scholarship — Samsung R&D Center Vietnam *Mar. 2024 – Jun. 2024*

TECHNICAL SKILLS & CERTIFICATIONS

Cloud & IaC : AWS (EKS, ECS Fargate, RDS, ElastiCache, S3, SQS, EventBridge, CloudFront, WAF, ALB, Route 53, IAM, VPC, KMS), Terraform, TFLint, tfsec, Checkov

Containers & CI/CD : Docker (Buildx/QEMU), Kubernetes (EKS), Helm, Traefik, Floci (local AWS emulation), GitHub Actions, Jenkins, ArgoCD, AWS CodePipeline/CodeBuild/CodeDeploy (blue/green), crane

Observability & Security : Prometheus, Grafana, CloudWatch, OpenTelemetry (ADOT), GuardDuty, CloudTrail, AWS Config, Trivy, Gitleaks

Languages & Data : Python, Bash, YAML, Linux, PostgreSQL, Redis/Valkey

Certifications : **AWS Certified Solutions Architect – Associate** (June 2026), Samsung S/W Professional Level (2024)
