NGUYEN TRUNG DUC

DEVOPS / CLOUD ENGINEER

Hanoi, Vietnam | +84 386 743 212 | duc.nt.bn2002@gmail.com
linkedin.com/in/ng-trungduc | ducnt2002.github.io

PROFESSIONAL SUMMARY

DevOps / Cloud Engineer with 4+ years of experience building and operating AWS infrastructure. Hands-on with Terraform, Kubernetes/EKS, ECS Fargate, CI/CD, cloud networking, and incident response. Supported multi-region production services, including a messaging platform receiving sustained HTTP traffic from Samsung devices, alongside greenfield delivery and UAT platforms. AWS Certified Solutions Architect – Associate.

TECHNICAL SKILLS

Cloud & Networking: AWS, VPC, Transit Gateway, VPC endpoints, ALB/NLB, CloudFront, RDS, S3, EFS, ECS Fargate, Lambda.

Infrastructure & Delivery: Terraform, Kubernetes/EKS, Helm, Docker, GitHub Actions, ArgoCD, Jenkins, AWS CodePipeline, CodeBuild, CodeDeploy.

Observability & Reliability: CloudWatch, Container Insights, Prometheus, Grafana, Fluent Bit, Telegraf, OpenTelemetry/ADOT; incident investigation and recovery runbooks.

Security: IAM, OIDC-based AWS authentication, Trivy, Gitleaks, Checkov, CloudTrail.

Scripting & Data: Bash, Python, Linux, PostgreSQL, Redis/Valkey. Project-specific: API Gateway, RDS Proxy, Amazon Connect, Lex, Bedrock.

PROFESSIONAL EXPERIENCE

TechX | DevOps / Cloud Engineer

Sep 2026 – Present | Hanoi, Vietnam

- Develop Terraform-managed infrastructure and GitHub Actions delivery for an airline operations UAT platform, covering private ECS networking, OIDC authentication, database migrations, and monitoring.
- Build separate Terraform plan/apply workflows with manual apply controls and reuse of plan artifacts; contribute infrastructure modules and Lambda integrations to a banking voicebot PoC.

Sora Technologies | DevOps / Cloud Engineer

Jun 2026 – Sep 2026 | Hanoi, Vietnam

- Served as the sole DevOps engineer supporting three product teams, delivering AWS environments, deployment automation, and operational foundations from development through production.
- Implemented Terraform-based ECS Fargate and Lambda platforms with image-digest promotion, production release controls, OIDC-based CI/CD, security scanning, and observability.

Samsung R&D Center Vietnam | DevOps / Cloud Engineer

Mar 2022 – Jun 2026 | Service Operation

- Provisioned and operated AWS infrastructure for three production services: Samsung Messaging Platform, Galaxy Gift, and Remote Test Lab, with separate development and staging environments.
- Supported multi-region EKS production workloads, delivery pipelines, centralized monitoring and logging, incident investigation, and deployment/recovery runbooks.
- Achieved approximately 20–40% cost reduction across managed services, varying by service, through rightsizing, scheduling, and architecture optimization.

EDUCATION & CERTIFICATIONS

Hanoi University of Industry — Bachelor of Computer Science, Oct 2020 – Jun 2024; CPA 3.47.

AWS Certified Solutions Architect – Associate (Jun 2026).

Samsung S/W Professional Level (2024) · Samsung Talent Program Scholarship (2024).

SELECTED ENGINEERING PROJECTS

Samsung Messaging Platform (SMP) | Samsung R&D

Apr 2025 – Jun 2026 | Production

Push-notification and campaign platform using Firebase Cloud Messaging and Samsung Push Platform.

- Operated three production EKS clusters across Singapore, Oregon, and N. Virginia (approximately eight nodes per region), alongside development and staging environments.
- Supported sustained traffic of approximately 3–4 million HTTP requests/minute to ALBs across all three regions, primarily periodic device reporting. Within that total, approximately 300–400K requests/minute initiated push messages from other Samsung platforms and users.
- Provisioned EKS/ECS, networking, ALB, CloudFront, S3, VPC endpoints, ECR, and RDS with Terraform; maintained AWS CodePipeline/CodeBuild delivery and CloudWatch/Fluent Bit observability.
- Supported an AWS environment with approximately $90K in monthly spend; optimization work included rightsizing, scheduling, and architecture changes across managed services.

Galaxy Gift | Samsung R&D

Aug 2024 – Jun 2026 | Production

- Operated a Singapore production EKS cluster (approximately 16 nodes) with separate development and staging environments; implemented Terraform infrastructure, ArgoCD GitOps, Karpenter scaling, and Prometheus/Grafana monitoring.
- Investigated recurring failures to schedule new workloads on EKS nodes while existing pods continued running. Used node replacement as an operational mitigation while investigating the underlying cause.

Remote Test Lab | Samsung R&D

Jun 2024 – Jun 2026 | Production

- Maintained EC2/ECS infrastructure for global remote device testing. Migrated Jenkins delivery to GitHub Actions/CodeDeploy, implemented Telegraf monitoring and CloudFront Functions, and maintained operational runbooks.

Shared-storage incident | Samsung R&D

- Responded to a legacy SoftNAS/NFS failure affecting application uploads. Restored shared-storage availability through migration to Amazon EFS.

Panwall-DX & Genta-Bento | Sora Technologies

- Panwall-DX: implemented Terraform-managed ECS Fargate infrastructure, promoting the same image digest across environments for blue/green production releases; integrated CI security checks and ADOT tracing.
- Genta-Bento: implemented Lambda container delivery with RDS Proxy, production approval gates, database migrations, and smoke tests.

Airline Operations & Banking Voicebot | TechX

- Airline UAT: developed ECS Fargate services with Transit Gateway/VPC endpoint connectivity, task-level IAM, alarms, and deployment/migration workflows.
- Banking voicebot PoC: contributed Terraform infrastructure and Lambda integrations across Amazon Connect, Lex, Bedrock, and RDS.
